

iDirect Evolution Installation Guide

Wafa Technical Systems Services,
<http://www.wafa.ae>

Contents

1. Before you start

What you will need before configuring the modem

2. Connecting to the modem

How to set up your connection to the modem

3. Loading the option file

How to load the required configuration file

4. Acquiring the satellite signal

What to take into consideration when pointing the dish

5. Activating the modem

How to start the activation process

1. Before you start

- a) Please ensure that you have submitted the online activation form at
- b) Once this is done, you will receive the required files to configure you modem; this will include the **option file** (R12345.opt) and your IP details.
- c) You will also need the corresponding version of iSite:

Evolution W2A (C- Band) : iSite 12.0.0.0

Evolution W3A/W6 S2 : iSite 12.0.0.0

Evolution AM22: iSite 12.0.0.0

Infiniti Sesat2/W3A/W6 S1 : iSite 12.0.0.0

It is **very important** that the correct version is used depending on what satellite the modem in on; if you are unsure which version to use, please contact support

The above software can be downloaded from

<http://www.wafa.ae/en/vsat/support/evolution>

2. Connecting to the modem

- a) Connect an RJ45 cable from the LAN port on the modem to a hub or switch (the interface runs at 100mbps/full duplex) the to a PC

If connecting straight from the modem to a PC, use a crossover cable.

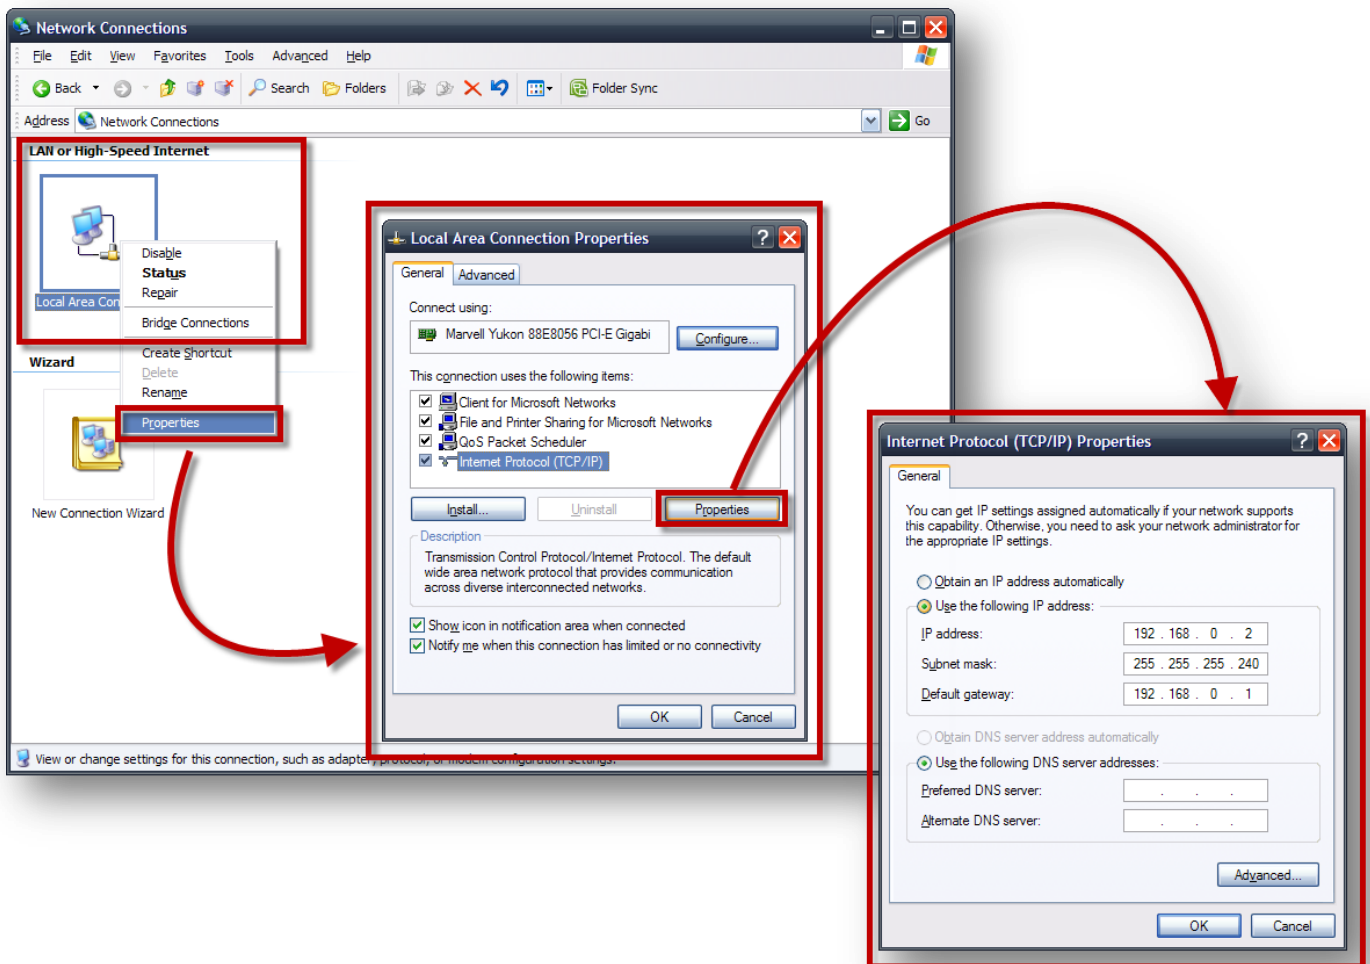

b) Set up the PC with the following default IP addresses

IP Address: 192.168.0.2

Subnet Mask: 255.255.255.240

Default gateway: 192.168.0.1

To do this in Windows XP go to Start > Control Panel > Network Connections:

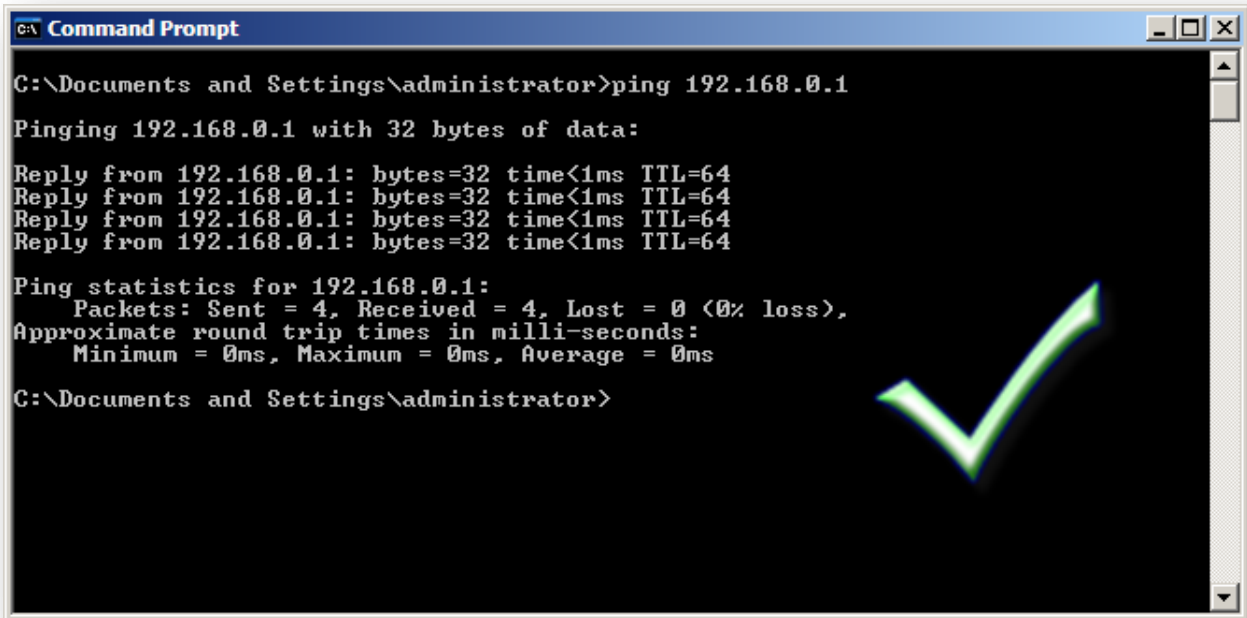

If you are having issues doing this with windows 7, follow the step by step guide below:

<http://windows.microsoft.com/en-US/windows7/Change-TCP-IP-settings>

- c) To confirm that the PC can now communicate with the modem, open a command prompt (Start > run/search > type “cmd” and hit enter)
Type “**ping 192.168.0.1**”

If everything is set up correctly, results should be as below:

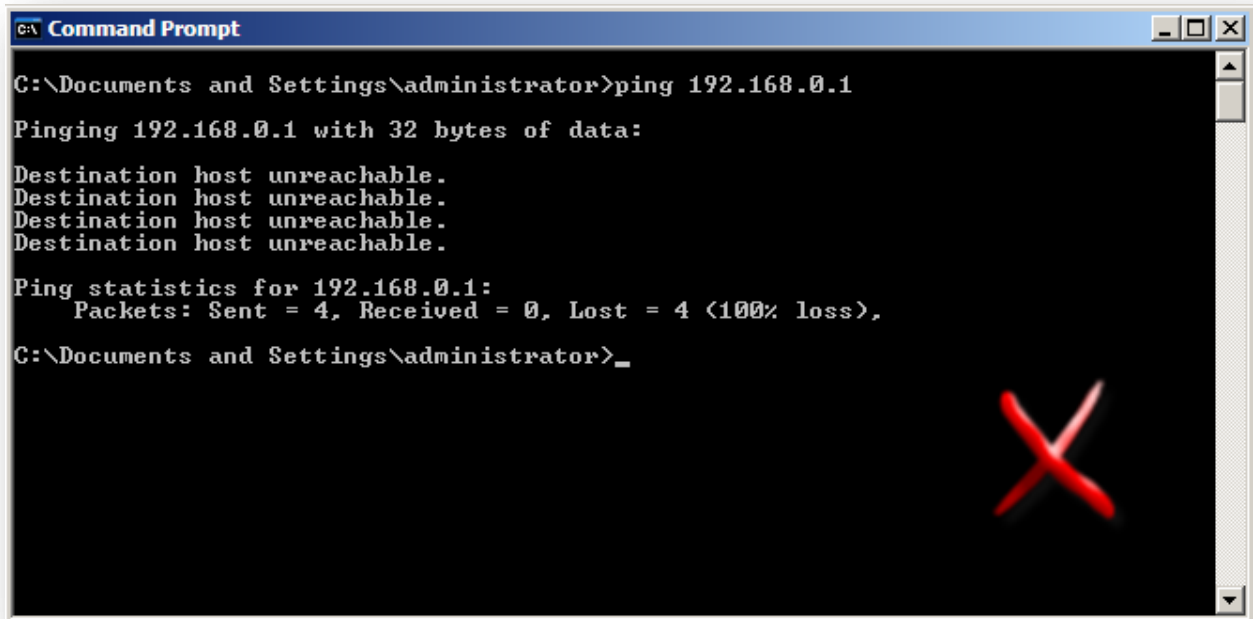

```
C:\Documents and Settings\administrator>ping 192.168.0.1
Pinging 192.168.0.1 with 32 bytes of data:
Reply from 192.168.0.1: bytes=32 time<1ms TTL=64
Reply from 192.168.0.1: bytes=32 time<1ms TTL=64
Reply from 192.168.0.1: bytes=32 time<1ms TTL=64
Reply from 192.168.0.1: bytes=32 time<1ms TTL=64

Ping statistics for 192.168.0.1:
    Packets: Sent = 4, Received = 4, Lost = 0 (0% loss),
    Approximate round trip times in milli-seconds:
        Minimum = 0ms, Maximum = 0ms, Average = 0ms

C:\Documents and Settings\administrator>
```

If results are “Request timed out” or “Destination host unreachable” or “Hardware Error”, cables and settings need to be rechecked

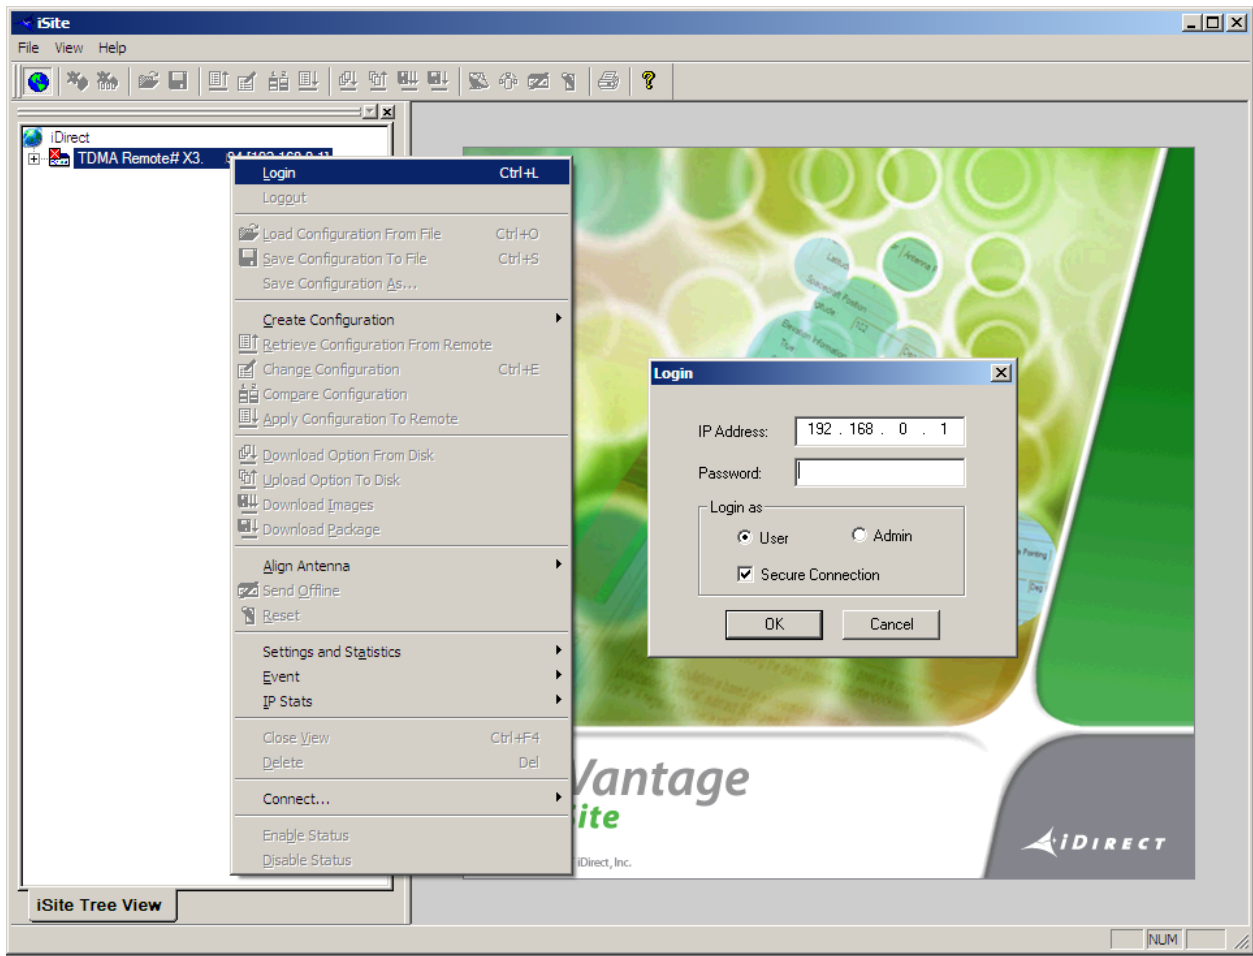

```
C:\Documents and Settings\administrator>ping 192.168.0.1
Pinging 192.168.0.1 with 32 bytes of data:
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.
Destination host unreachable.

Ping statistics for 192.168.0.1:
    Packets: Sent = 4, Received = 0, Lost = 4 (100% loss),

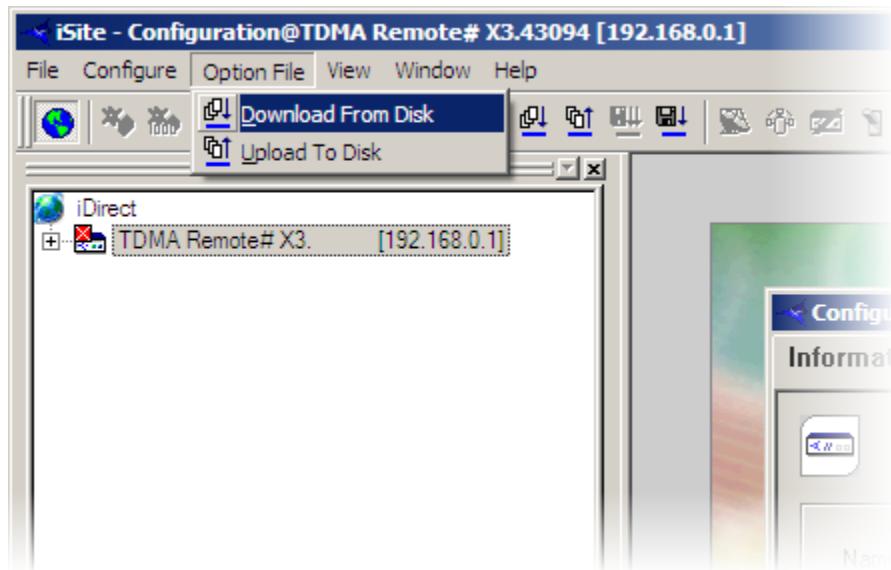

C:\Documents and Settings\administrator>_
```

3. Loading the option file

- a) Log in to iSite by clicking on the “TDMA Remote” and clicking “Login”. The default password is: **iDirect**

- b) Once logged in, click on “Option file” in the top menu, then “Download from disk”

- c) Browse to where the option file is saved and open. It should only take a few seconds to load and then to modem will reboot

d) You will now need to change your computers IP settings to reflect the update. Follow Step 2 again using the IP addresses that were supplied with the option file

- e) Also, the password for iSite and telnet access will now have **changed** from the default “iDirect”; depending on what satellite the modem is configured for, it will be:

- W2A-C Band / W3A/W6/T-11 S2: **bentleys2**
- AM22: **eutelsat2008**
- SeSat2/W6 S1: **eutelsat**
- W3A S1: **london12**

4. Acquiring the satellite signal

If you are aligning the dish yourself, you will need to do the following:

- a) Calculate your estimated dish pointing angles:

Visit <http://www.satsig.net/ssazelm.htm>

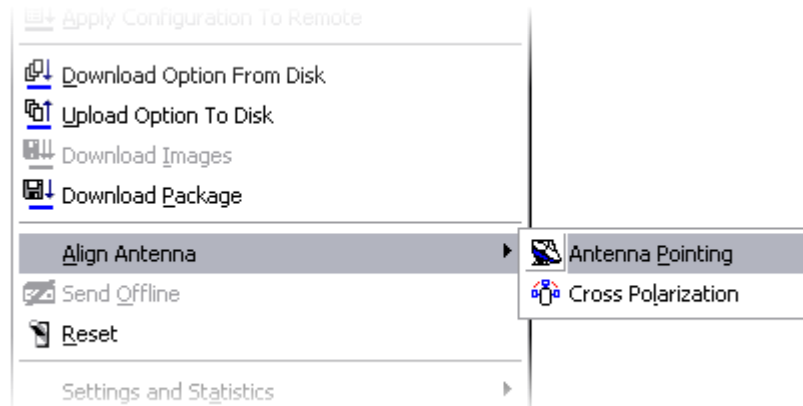

Input the **satellite orbit**: W6=21; W3A=7; AM22=53; W2A=10

Input your **latitude** and **longitude** and click calculate

This will return **azimuth** (magnetic) which is the left and right movement of the dish; **elevation**, the up and down movement of the dish; and the **polarisation**, which is the rotation angle of the feed assembly.

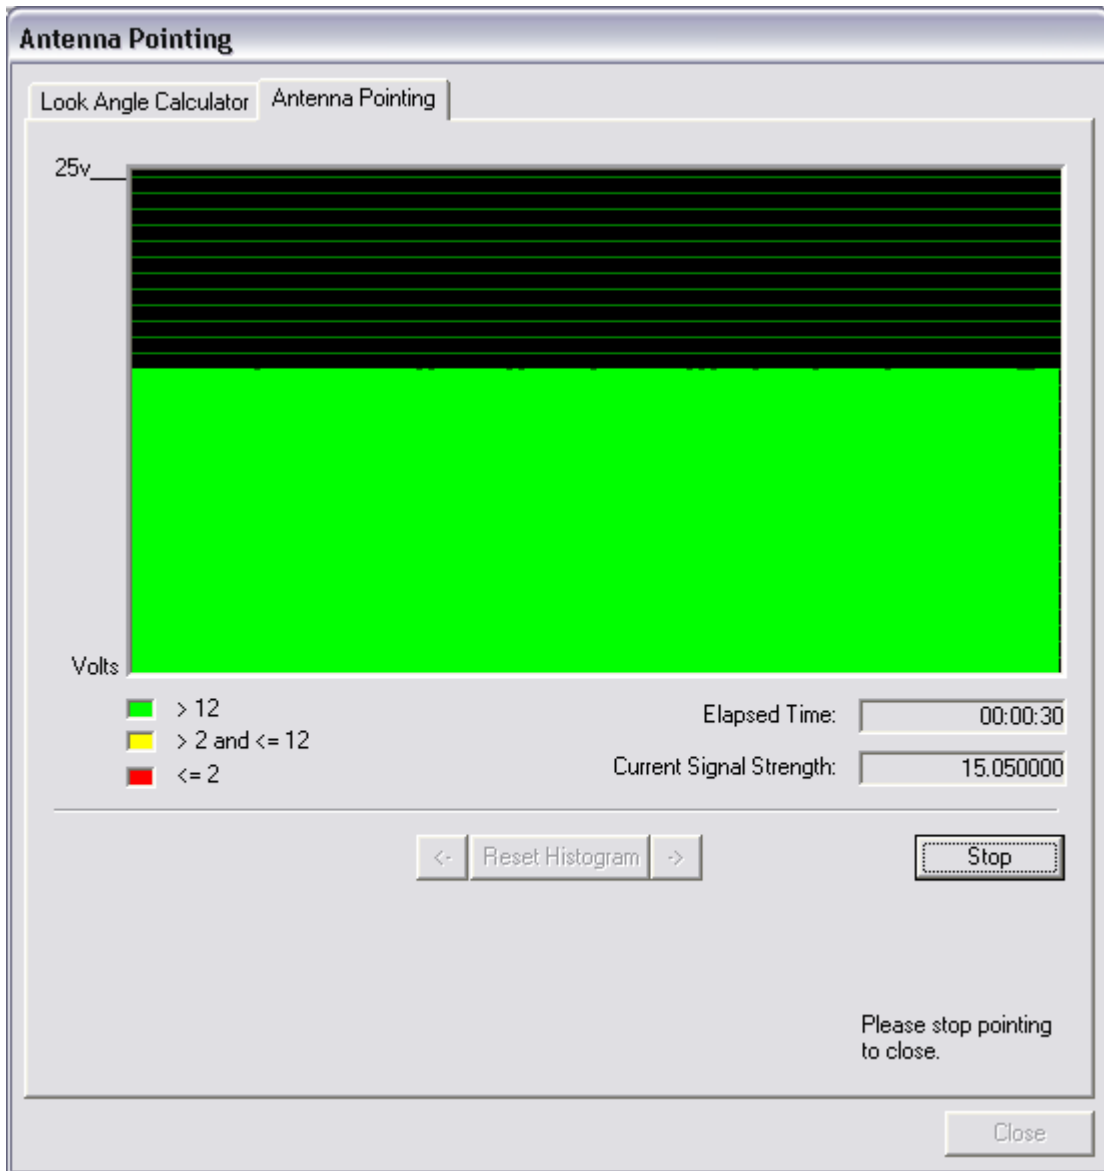

Use these value to point the dish in the right direction

- b) We recommend using a **Satellite Meter** such as a MaxPeak or Horizon to then find the satellite signal
- c) Once you have a lock on the signal, open up the “antenna pointing tool” in iSite by right clicking on the remote and selecting “Align Antenna” > “Antenna Pointing”

Click on the “Antenna Pointing” tab at the top then click “Start”

After a short period, the graph will start showing data; use this to adjust the dish until you are seeing around **16v**

6. Activating the modem

a) You will need to check if transmit is **enabled**.

Open a command prompt and type “telnet” space, then the modems IP address

The username will be **admin** and password will be either **bentleys2** (W3A/W6 S2), **eutelsat2008** (AM22), **eutelsat** (SeSat2/W6 S1) or **london12** (W3A S1)

Once logged in, type the command: **tx iflDC** (note that “DC” must be uppercase)

If this is set to **off**, retype the command: **tx iflDC on**

b) If everything is setup correctly, the RX and Power light on the front of the modem will be solid green

c) You will then need to contact Technical Support to request activation

Should you encounter any difficulties setting up your modem, please contact Wafa technical support:

support@wafa.ae

+971-2-6334216

or raise a support ticket if you have the facility to do so.
